

We power unified IoT networks for leading global enterprises

Create a shared sensor network and connect any IoT device

Send the data directly to your cloud applications

Future-proof any commercial space with a shared network approach

Smart Buildings

Retail & Hospitality

Logistics & Transportation

## Add an IoT network to your Ericsson Router

1. Add the Bluetooth Low Energy option available on select Ericsson routers

R1900

R920

E300

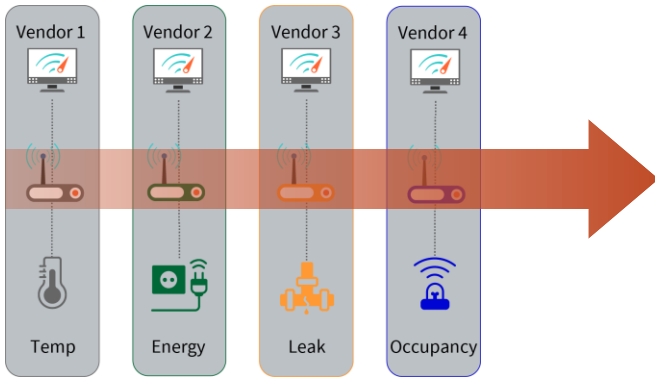

E3000

2. Install Rigado Edge Connect software on the Ericsson docker container

3. Build a dashboard, app or use an existing solution

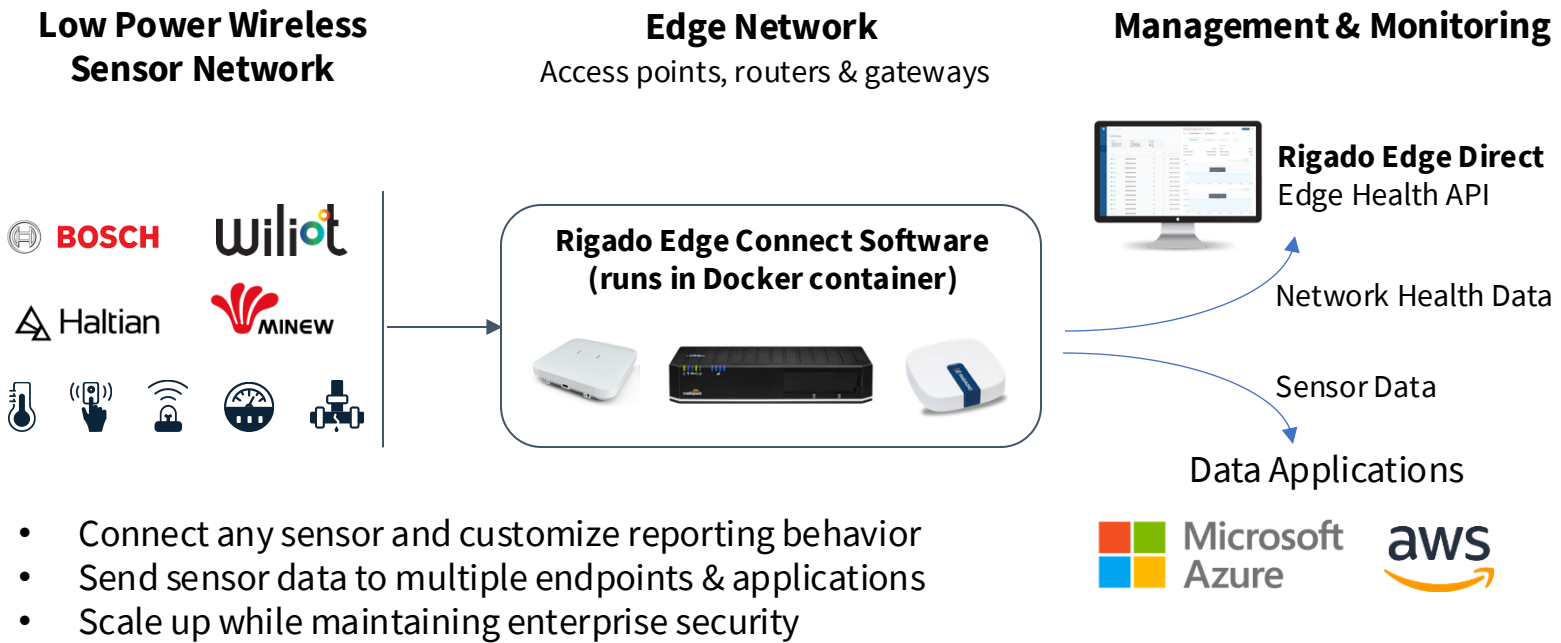

## Avoid deploying dedicated gateways and apps for every use case

### This approach results in:

- ✗ Reduced ROI and increased SaaS fees
- ✗ Overlapping network deployments
- ✗ Security gaps & inconsistent data
- ✗ More management overhead

## We send data directly to your dashboard, workflow or application

**“Rigado helps building owners and operators accelerate the adoption of IoT sensors across their portfolios.”**

*-Susan Clarke, Smart Building Research Director at Verdantix*

We connect millions of devices for market-leading service providers
